Office Action Summary	Application No. 10/825,209	Applicant(s) TAKAGI	
	Examiner Scott J. Sugarman	Art Unit 2873	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Hori et al (JP 2002189442A). Hori et al teaches a camera having a lens unit having a zooming function that includes a zoom magnification detecting means (7) for detecting a magnification based on the zooming function and trapezoidal distortion correcting means (6) for correcting a trapezoidal distortion of an image captured by the lens unit depending on the magnification detected by the zoom magnification detecting means (see Solution section with Abstract). The digital signal processing section (2) and decision circuit (5) would inherently have a memory means for storing parameters required to correct a trapezoidal distortion of an image as well as read parameters corresponding to the magnification which is detected from the memory means and

correcting the trapezoidal distortion according to the read parameters. A shifting means is what allows for the correction of the trapezoidal distortion.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Japan reference, JP 05265082A is cited to show an optical system having a trapezoidal distortion correction means.
